

# Daily Briefing

TODAY:

7:30 am - 1 pm:

Session 1:  
World Cafe

Session 2:  
Context &  
process

Session 3:  
Conversation  
mapping

Evening:

Reflection

# Welcome to Mozambique Island

Safe food produced using safe methods and in safe conditions.

Economic sustainability in union with community development.

Ensuring a nutritious and consistent supply of food.

Establishing food and agricultural production systems that meet these goals requires the engagement of those in food and agricultural production with leaders within local communities.

"We are in an era defined by the need for sustainability," said Richard Bawden, the facilitator of the October 21 – 24 Sustainability Workshop at Mozambique Island. The workshop is hosted by Technoserve.

"These systems in which we work are complex," Bawden suggests. "It's not just about science and technology, but includes ethically-based judgment and environmental concerns."

It is understood that new models of cooperation are needed

for an ever-changing world.

Investing in sustainability requires co-creating and co-designing these new models, new systems and new approaches.

Meeting host Jake Walter of Technoserve recognizes the complexity of these systems. Walter has worked in both disease management and agricultural production.

Walter foresees that participants will emerge from the workshop with fresh insights and a plan to advance sustainability in Northern Mozambique and beyond.
